

Make Your Own Rocket Blaster!

Materials:

- 2 cardboard tubes (one that fits inside of the other)
- 1 Rubber Band
- Cardstock or plastic lid to fit the top of the inner tube.
- Tape
- Stickers or markers
- Screwdriver to make holes in the tubes
- Pom-poms

How to do it:

1. Cut the cardboard tubes to the same size - about 12 inches each. Any tubes you have on hand are perfect.
2. Cut the rubber band.
3. Cover the end of the smaller, inner tube with a piece of cardboard, or glue on a plastic lid. The hole just needs to be covered.
4. On the smaller tube, make two holes around the center using a screw driver. Make two holes in the larger tube through both sides about an inch from the bottom. You want the holes to line up on both tubes to thread the rubber band through. Make sure there is a good amount of the smaller tube hanging out the bottom when the holes are lined up.
5. Thread the rubber band through. You may need to use tweezers for this part.
6. Attach the rubber bands to the outer tube with some tape.
7. Time to decorate! Use stickers or draw all over the tube.
8. Test it out! Fill the tube with pom-poms and pull the smaller tube back and watch them fly.
